Use case 2: Reusing curation data to clear a software package of a newer version

OSSelot – The Open Source Curation Database

https://github.com/Open-Source-Compliance/package-analysis

- Contains license and copyright analysis results for certain packages (created with FOSSology):
 - Readme with metadata of the package, e.g. download location, comments
 - SPDX Tag:Value file with concluded licenses, copyright notices and comments on decisions
 - Disclosure document with aggregated license texts, copyright notices and acknowledgments

Reusing curation data (FOSSology)

- Example: new version OpenSSL v3.0.5, already cleared version v3.0.3
- Clearing updated versions of a software package with FOSSology reusing existing curation data involves the following steps:
 - 1. Converting SPDX Tag: Value file into SPDX RDF format.
 - 2. Uploading curated source packages into FOSSology.
 - 3. Importing the SPDX RDF file into the corresponding package in FOSSology.
 - 4. Clearing any remaining files.
 - 5. Uploading current package into FOSSology with the "Reuse" option, referring to the corresponding curated package.
 - 6. Clearing any new or changed files.

1. Converting SPDX Tag:Value file into SPDX RDF format

- Make sure that the root directories given in the SPDX TV files under "FileName:" is identical to the root directories of the current packages, otherwise the import in step 3 will not work.
- Download the current version of the SPDX tools: https://github.com/spdx/tools-java
- Convert the TV file into an RDF file:

```
$ java -jar tools-java-1.0.4-jar-with-dependencies.jar \
Convert [SPDXTV.taq] [SPDXRDF.rdf]
```

2. Upload curated packages into FOSSology

y Version: [4.0.0.0], Branch: [HEAD], Commit: [#4b7556] 2022/01/21 08:43 UTC built @ 2022/01/24 08:42 UTC

To manage your own group permissions go into Admin > Groups > Manage Group Users. To manage permissions for this one upload, go to Admin > Upload Permissions.

This option permits uploading a single file (which may be iso, tar, rpm, jar, zip, bz2, msi, cab, etc.) or a directory from a remote web or FTP server to FOSSology. The file or directory to upload must be accessible via a URL and must not require human interaction such as login credentials.

1.	Select the folder for storing the uploaded files:
	Use Case 1 ▼
2.	Enter the URL to the file or directory:
	https://github.com/openssl/openssl/archive/refs/tags/openssl-3.0.3.tar.gz
3.	(Optional) Enter a viewable name for this file or directory:
	OpenSSL v3.0.3
	Note: If no name is provided, then the uploaded file (directory) name will be used.
4.	(Optional) Enter comma-separated lists of file name suffixes or patterns to accept:
5.	(Optional) Enter comma-separated lists of file name suffixes or patterns to reject:
6.	(Optional) maximum recursion depth (inf or 0 for infinite):
7	(Optional) Enter a description of this file:
١.	(Optional) Effet a description of this life.
8.	Apply global decisions for current upload n
٥.	The short decisions for current abroad 1
9.	Ignore SCM files (Git, SVN, TFS) and files with particular Mimetype (1)

3. Import the SPDX RDF file into the corresponding package in FOSSology

Search Browse Upload Jobs Organize Admin Help **Report Import**

Version: [4.0.0.0], Branch: [HEAD], Commit: [#4b7556] 2022/01/21 08:43 UTC built @ 2022/01/24 08:42 UTC

- 1. Select the folder that contains the upload: Use Case 1 ▼
- 2. Select the upload you wish to edit: OpenSSL v3.0.3 from 2022-07-14 15:58:58 ▼
- 3. Select report to upload: Browse... openssl-3.0.3-SPDX2RDF.rdf
- 4. Select how the information should be imported:
 - Create new licenses as
 - O license candidate
 - O new license
 - Add the License Info as findings from
 - ☐ SPDX tag of type licenseInfoInFile
 - ✓ SPDX tag of type licenseConcluded
 - - also overwrite existing decissions
 - ☐ import as "to be discussed"
 - Add the copyright information as textfindings

Upload and Import

Issues with Import Report

Importing the RDF file into FOSSology still has some issues:

- Matching of files happens via full file path and not checksum
 → requires identical root directory
- Import looses the tag "LicenseComment" which holds the explanation for certain decisions of "LicenseConcluded".
- Files with "LicenseInfoInFile: [some value]" and "LicenseConluded: NOASSERTION" must be cleared manually.
- Curated copyright notices are only imported as "text findings".

4. Clearing any remaining files
